

Exercise 9

Name: Manisha M
Rollno: 240701304

Design input forms that validate data (e.g., email, phone number) and display error messages using HTML/CSS, JavaScript (with Validator.js)

AIM:

The aim is to design input forms that validate data, such as email and phone number, and display error messages using HTML/CSS and JavaScript with Validator.js.

PROCEDURE:

Step 1: Setting Up the HTML Form

Start by creating an HTML form with input fields for the email and phone number.

html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width,
  initial-scale=1.0"> <title>Form Validation</title>
  <link rel="stylesheet" href="style.css">
</head>
<body>
  <div class="container">
    <form id="myForm">
      <label for="email">Email:</label>
```

```

<input type="email" id="email" name="email" required>
<span id="emailError" class="error"></span>

<label for="phone">Phone Number:</label>
<input type="text" id="phone" name="phone" required>
<span id="phoneError" class="error"></span>

<button type="submit">Submit</button>
</form>
</div>
<script
src="https://cdnjs.cloudflare.com/ajax/libs/validator/13.6.0/validator.min.js"></scr
ipt> <script src="script.js"></script>
</body>

```

```

</html>

```

The image shows a rendered HTML form. It has a light gray background. Inside, there's a white rounded rectangle. At the top, it says 'Email:' in bold. Below it is a text input field. Then it says 'Phone Number:' in bold. Below that is another text input field. At the bottom is a green button with the word 'Submit' in white text.

Step 2: Styling the Form with CSS

Next, add some basic styling to make the form look nice.

css

```
body {
  font-family: Arial,sans-serif;
  background-color: #f4f4f4;
  display: flex;
  justify-content: center;
  align-items: center;
  height: 100vh;
  margin: 0;
}
.container {
  background-color: white;
  padding: 20px;
  border-radius: 5px;
  box-shadow: 0 0 10px rgba(0, 0, 0,
0.1); }

form {
  display: flex;
  flex-direction: column; } label {
  margin-bottom: 5px;
} input {
  margin-bottom: 10px;
  padding: 10px;
  border: 1px solid #ccc;
  border-radius: 3px;
} button {
  padding: 10px;
```

```
background-color: #28a745;
color: white;
border: none;
border-radius: 3px;
cursor: pointer;
}
```

```
button:hover {
  background-color: #218838;
}
```

```
.error {
  color: red;
  font-size: 0.875em;
}
```

Step 3: Adding JavaScript for Validation

Finally, add JavaScript to validate the input fields using Validator.js and display error messages.

javascript

```
□ script.js
  */
  /*
```

```
document.getElementById('myForm').addEventListener('submit', function (e)
{ e.preventDefault();
```

```
let email = document.getElementById('email').value;
let phone = document.getElementById('phone').value;
let emailError = document.getElementById('emailError');
```

```
let phoneError = document.getElementById('phoneError');
emailError.textContent = "";
phoneError.textContent = "";
if (!validator.isEmail(email)) {
    emailError.textContent = 'Please enter a valid email address.';
}
if (!validator.isMobilePhone(phone, 'any')) {
    phoneError.textContent = 'Please enter a valid phone number.';
}
if (validator.isEmail(email) && validator.isMobilePhone(phone, 'any')) {
    console.log('Email:', email);
    console.log('Phone:', phone);
}
});
```

Email:

Invalid Email!

Phone Number:

Invalid Indian Phone Number!

Submit

Result: The aim is to design input forms that validate data, such as email and phone number, and display error messages using HTML/CSS and JavaScript with [Validator.js](#) was created.
